A PYTHON PROGRAM TO IMPLEMENT MULTILAYER PERCEPTRON WITH BACK PROPOGATION

Aim:

To implement multilayer perceptron with back propagation using python.

Algorithm:

Step 1: Import the Necessary Libraries

- Import pandas as pd.
- Import numpy as np.

Step 2: Read and Display the Dataset

- Use ``pd.read_csv("banknotes.csv")`` to read the dataset.
- Assign the result to a variable (e.g., ``data``).
- Display the first ten rows using ``data.head(10)``.

Step 3: Display Dataset Dimensions

- Use the ``.shape`` attribute on the dataset (e.g., ``data.shape``).

Step 4: Display Descriptive Statistics

- Use the ``.describe()`` function on the dataset (e.g., ``data.describe()``).

Step 5: Import Train-Test Split Module

- Import ``train_test_split`` from ``sklearn.model_selection``.

Step 6: Split Dataset with 80-20 Ratio

- Assign the features to a variable (e.g., ``X = data.drop(columns='target')``).
- Assign the target variable to another variable (e.g., ``y = data['target']``).
- Use ``train_test_split`` to split the dataset into training and testing sets with a ratio of 0.2.

- Assign the results to ``x_train``, ``x_test``, ``y_train``, and ``y_test``.

Step 7: Import MLPClassifier Module

- Import ``MLPClassifier`` from ``sklearn.neural_network``.

Step 8: Initialize MLPClassifier

- Create an instance of ``MLPClassifier`` with ``max_iter=500`` and ``activation='relu'``.
- Assign the instance to a variable (e.g., ``clf``).

Step 9: Fit the Classifier

- Fit the model using ``clf.fit(x_train, y_train)``.

Step 10: Make Predictions

- Use the ``predict()`` function on ``x_test`` (e.g., ``pred = clf.predict(x_test)``).
- Display the predictions.

Step 11: Import Metrics Modules

- Import ``confusion_matrix`` from ``sklearn.metrics``.
- Import ``classification_report`` from ``sklearn.metrics``.

Step 12: Display Confusion Matrix

- Use ``confusion_matrix(y_test, pred)`` to generate the confusion matrix.
- Display the confusion matrix.

Step 13: Display Classification Report

- Use ``classification_report(y_test, pred)`` to generate the classification report.
- Display the classification report.

Step 14: Repeat Steps 9-13 with Different Activation Functions

- Initialize ``MLPClassifier`` with ``activation='logistic'``.

- Fit the model and make predictions.
- Display the confusion matrix and classification report.
- Repeat for `activation='tanh'`.
- Repeat for `activation='identity'`.

Step 15: Repeat Steps 7-14 with 70-30 Ratio

- Use `train_test_split` to split the dataset into training and testing sets with a ratio of 0.3.
- Assign the results to `x_train`, `x_test`, `y_train`, and `y_test`.
- Repeat Steps 7-14 with the new training and testing sets.

PROGRAM:

```
import pandas as pd
import numpy as np
bnotes = pd.read_csv('../input/banknotes-dataset/bank_note_data.csv')
bnotes.head(10)
```
